

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~striketrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please AMEND claims 5, 18, and 21, and CANCEL claims 1-4, 16-17, 20, and 25-26 without prejudice or disclaimer in accordance with the following:

1-4. (Canceled)

5. (Currently Amended) A reproducing apparatus comprising:

a mainstream reproducing unit to reproduce mainstream data including still image data, ~~using a clock for mainstream data,~~ using a mainstream arrive time clock which is used to depacketize the mainstream data and a mainstream system time clock which is used to decode the depacketized mainstream data; and

a sub audio reproducing unit to reproduce sub audio data separately added into the mainstream data, ~~using a clock for sub audio data,~~ using a sub audio arrival time clock which is used to depacketize the sub audio data and is independent of the mainstream arrival time clock and a sub audio system time clock which is used to decode the depacketized sub audio data and is independent of the mainstream system time clock.

6. (Original) The apparatus of claim 5, wherein:

the mainstream reproducing unit comprises:

a mainstream depacketizer that depacketizes the mainstream data, and

a mainstream ATC counter which is used in depacketizing the mainstream data with the mainstream depacketizer; and

the sub audio reproducing unit comprises:

a sub audio depacketizer that depacketizes the sub audio data, and

a sub audio ATC counter which is used in depacketizing the sub audio data with the sub audio depacketizer.

7. (Original) The apparatus of claim 6, wherein:
the mainstream reproducing unit further comprises:
a mainstream decoder that decodes the mainstream data output from the mainstream depacketizer, and
a mainstream STC counter that provides a clock used in decoding the mainstream data with the mainstream decoder; and
the sub audio reproducing unit further comprises:
a sub audio decoder that decodes the sub audio data output from the sub audio depacketizer, and
a sub audio STC counter that provides a clock used in decoding the sub audio data with the sub audio decoder.

8-15. (Canceled)

16-17. (Canceled)

18. (Currently Amended) A reproducing apparatus reproducing video and audio data streams recorded on a recording disc, comprising:
a first reproducer reproducing a first data stream based on first counters; and
a second reproducer reproducing a second data stream based on second counters,
wherein the first counters comprise a first arrival time clock counter and a first system time clock counter, and the second counters comprise a second arrival time clock counter and a second system time clock counter which are initialized based on program clock reference information in the first and second data stream.

19. (Original) The apparatus of claim 18, wherein when the first and second counters are independently adjusted without affecting each other.

20. (Canceled)

21. (Currently Amended) The apparatus of ~~claim 20~~claim 18, wherein:
the first reproducer comprises:

a first buffer which captures the first data stream;
a first source depacketizer which depacketizes the first data stream based on a count of the first arrival time clock counter; and
a demultiplexer which demultiplexes the depacketized first data stream; and
a first decoder decoding the demultiplexed first data stream based on a count of the first system time clock counter.

22. (Original) The apparatus of claim 21, wherein the first data stream comprises mainstream data, and the second data stream comprises sub audio data.

23. (Original) The apparatus of claim 22, wherein the mainstream data comprises still image data.

24. (Original) The apparatus of claim 22, wherein the mainstream data comprises a browsable slide show.

25. (Canceled)

26. (Canceled)

27. (Original) The apparatus of claim 21, wherein the second reproducer comprises:
a second buffer which captures the second data stream;
a second source depacketizer which depacketizes the second data stream based on a count of the second arrival time clock counter;
a second decoder decoding the depacketized second data stream based on a count of the second system time clock counter.

28. (Original) The apparatus of claim 27, wherein the first data stream comprises mainstream data, and the second data stream comprises sub audio data.

29. (Original) The apparatus of claim 27, wherein the second data stream comprises sub audio data which is reproduced regardless of the first data stream reproduction.

30. (Original) The apparatus of claim 27, wherein the second data stream is separately added to the first data stream on the recording disc.
